in american church culture worldly benchmarks of achievement have all but blinded us to the true purpose of the body of christ a new model of the authentic church may be one of the most significant books written on the american church in decades it not only offers a scholarly analysis of the current state of the church but provides practical solutions the book offers a brilliantly well developed model for how to make church work more effectively if implemented it would provide a much needed paradigm shift in how we do church in america the books main contribution is that it provides a workable framework not only on how to birth new missionally minded churches but how to reform existing ones back to the authentic church of the gospels if its principles are taken and applied the book could alter the landscape of the american church which will be a breath of fresh theological air to a church that has lost its way in the new millennium the purpose of this book is not to just challenge and change the status quo its goal is to bring a real lasting

transformation to how we do church the aspiration in writing this book is for it to be seen and read not just as a critical assessment of the condition of the american church but as a practical blueprint that will provide much renewed hope and purpose to the contemporary american church the bride of christ

this book proposes a new capital asset pricing model dubbed the zcapm that outperforms other popular models in empirical tests using us stock returns the zcapm is derived from fischer black's well known zero beta capm itself a more general form of the famous capital asset pricing model capm by 1990 nobel laureate william sharpe and others it is widely accepted that the capm has failed in its theoretical relation between market beta risk and average stock returns as numerous studies have shown that it does not work in the real world with empirical stock return data the upshot of the capm's failure is that many new factors have been proposed by researchers however the number of factors proposed by authors has steadily increased into the hundreds over the past three decades this new zcapm is a path breaking asset pricing model that is shown to outperform popular models currently in practice in finance across different test assets and time periods since asset pricing is central to the field of finance it can be broadly employed across many areas including investment analysis cost of equity analyses valuation corporate decision making pension portfolio management etc the zcapm represents a revolution in finance that proves the capm as conceived by sharpe and others is alive and well in a new form and will certainly be of interest to academics researchers students and professionals of finance investing and economics
